

# Trust Through Transparent Results

Tangible results are a pivotal factor  
for securing funding.

That's why the U.S. government hired SmartLogic to build a digital system that made it easier for federal agencies to run open public innovation challenges. These challenges invite individuals and organizations to propose solutions to complex problems faced by the US Government.

## WHAT WE DELIVERED

Supported 800+ federal  
innovation challenges

Engaged 1M+ participants  
nationwide

4+ Year Ongoing Deployment  
to Cloud.gov

### A Platform for Collective Problem-Solving

Challenge.gov brings federal agencies, nonprofits, and citizens together to tackle some of the government's most vexing problems.

Since its launch, the platform has supported 800+ federal innovation challenges and engaged over 1 million users, turning ideas into impact.

### Integrating Innovation and Accountability

Transparency guided every part of Challenge.gov's design. SmartLogic built secure scoring and review systems that ensured every submission was evaluated consistently and fairly.

The platform replaced a manual system with a secure, self-service tool that allows for easy reporting. This kind of transparent data and collaboration builds trust, so agencies and funders have a clear view from investment to outcome.

Challenge.gov demonstrates how well-designed systems amplify the impact of every funding dollar, so you can demonstrate real, lasting change.
